Winning Reason

The all-new Titan GT77 model has an innovative cooling design. With high-end gaming expected to reach 15% of the market in 2022, market sales are predicted to reach 120,000. The Titan GT77 has dual coolant modules with seven heat pipes for extreme cooling capacity, especially when Cooler Boost is activated.

This year's all-new Titan GT77 model comes with five high-efficiency cooling technologies and the world's thinnest fan blades measuring in at just 0.1mm. This is not the last you'll see from this laptop.

Product Feature

When it comes to performance, the Titan GT77 must be at the top of the list. With the latest 12th gen Core i9-12900HX processor and NVIDIA RTX 3080 Ti graphics, the new Titan GT77 helps you dominate your gaming battlefield.

With MSI OverBoost technology, the Titan GT77 earns extra horsepower by unlocking the full power of GPU and CPU together. It delivers up to 175 watts of graphics power plus additional 55 watts from the CPU-- that is a mindblowing 230 watts of full power in total!
